

**DIGITAL TRANSFORMATION HAS ACCELERATED,
IS YOUR NETWORK HOLDING YOU BACK?**

**Yesterday's Networks Can't Handle
Tomorrow's Demands.**

Networks will continue to play a pivotal role in delivering new digital experiences to customers, employees, and guests. But increased network complexity, aging hardware, and rising TCO will hinder businesses objectives.

Manual operations increase risk of outages

26%

of network problems are caused by human error.

Network visibility and agility are limited

64%

of enterprises still use 4 to 10 tools to monitor and troubleshoot their networks.

IT gets distracted from more strategic activities

57%

of a network admin's time is spent reacting to or preventing performance issues.

These issues create a cascading, domino-like effect on the business.

Where delivery of new IT services is often delayed.

And applications and other digital services underperform.

So user experiences are subpar, disrupting employee and customer activities.

Harming business performance due to losses in productivity and revenue.

All resulting in an exorbitant TCO for the network and your business.

WHY YOU NEED SD-WAN

Simplify Networking with a Single Architecture

Deploy an end-to-end architecture to improve network interoperability, eliminate performance constraints, and deliver a consistent experience for IT teams across all domains.

Boost IT Agility with a Single Point of Control

Improve efficiency by giving IT teams everything they need to easily deploy, secure, and optimize networks from a single management console.

Enhance User Experience

Gain new levels of insights to optimize performance and elevate the user experience with client-side monitoring and self-healing AIOps.

Slash Operating Costs

Reduce errors, rework, on-site visits, and help desk tickets – enabling IT teams to focus more time on delivering value to the business, and less time manually maintaining the network.

**The Teneo Difference,
Powered by Aruba EdgeConnect**

An SD-WAN solution from Teneo, powered by Aruba, delivers new levels of IT simplicity, assurance, and performance, helping businesses embrace the digital future and prepare for the uncertainties that lie ahead.

56%

Lower TCO over three years

90%

Faster mean time to resolve issues

30K

Fewer user impacting incidents

25%

Higher network capacity
